Perfect Practice® Billing & Accounting

offers a single software solution for the financial management needs of your law firm.

Whether your firm does contingency, hourly, or flat fee billing – Perfect Practice® is adept at handling the billing and accounting requirements for practically any law size firm.

The **Billing & Accounting System** allows you to use information entered into Case Management System for “**enter data once**” billing and financial management. **Synergistic Integration** streamlines the data entry process. This minimizes the amount of data entry and **maximizes accuracy of information.**

Someone enters a cost check request. Another person approves that same check request, which automatically creates GL and cost ledger entries. When a case settles, those cost entries are pulled into the settlement statement.
